

Accordions

Compact and convenient, aluminum accordion shutters are housed beside the windows or doors when not in use. As their name suggests, they unfold from both sides of the opening to cover and protect during a storm. Manufactured by our expert accordion assembly team, each made-to-order shutter features a heavy track system to provide greater strength and security.

WHY CHOOSE ACCORDIONS?

With an easy deployment system, accordions provide safety against the roughest weather year round with continuous and reliable protection. Ideal for high-rise structures sustaining much higher wind loads, this 100% impact shutter system is also perfect to keep your property secure in the event that you are leaving your home vacant for a significant amount of time.

HOW TO DEPLOY ACCORDIONS

Simply unlatch the Velcro straps on your accordions, slide both sides to the center of your opening, and lock to secure your windows. Make sure to keep your fingers out of the track when interlocking the panels. Virtually undetectable from within your home, accordion shutters fit permanently along the sides of your windows, and don't need to be constantly taken down.
