

Aluminum Roll-Ups

State-of-the-art end retention shutters feature the most compact housing size in the world. Made of a combination of aluminum and marine-grade steel, this shutter system is permanently affixed above an opening. Unlike many other storm solutions, no bottom track is needed and these easy-to-deploy roll-up shutters don't require any additional storage.

WHY CHOOSE ALUMINUM ROLL-UPS?

Designed for increased durability and longevity even in the harshest environments, these shutters can easily be made storm ready by one person. Ideal for large patios and balconies, they can span over a 20-foot width without any intermediate support or storm bars. Roll-up shutters are the epitome of security, strength, and simplicity.

HOW TO DEPLOY ALUMINUM ROLL-UPS

This ultra-convenient shutter system can be electrically operated with a handheld remote control capable of operating sixteen shutters from a single remote or the use of a wall switch. Roll-ups can also be manually operated. When not in use, they simply roll up and store in the enclosed box, rendering this one of the fastest storm and property security methods.
